

PDK

DECONTAMINATION SET

NSN 6850 16 000 8240

USE:

- Decontamination and disinfection of personal equipment after CWA contamination.

The PDK Decontamination set is a highly active decontaminating agent based on active chlorine which is determined for decontamination and disinfection of personal weapons and combat techniques. PDK reliably decontaminates all types of the toxic substances. In the package which is rubber lined fabric, on top of which is the application instruction manual, there is the PVC sack containing calcium hypochlorite, detergent and chemicals ensuring the heating of the decontamination mixture. After removing from the package, the sack is filled with the prescribed amount of water and the content is mixed by hand outdoors. The mixture is prepared for application after the dissolution of the components.

Data:

Operation Temperature:	-25 °C - 50 °C	Expiry Date:	5 years
